HOME AUTOMATION SYSTEM COMPATIBILITY LIST

OHD Anywhere® garage door controller has its own app to work with most Wi-Fi enabled Android or Apple smart devices. However, some homeowners prefer to program OHD Anywhere with their existing home automation system. The OHD Anywhere® garage door controller is currently compatible with the following home automation system:

- Google Home
- Amazon Alexa

Note: If you do not see your system, please check back in the near future as others may become compatible at a later date.

IMPORTANT: The OHD Anywhere® controller is compatible only with residential sectional garage doors. It is not compatible with one-piece garage doors.

IMPORTANT: No brand or model of garage door opener made before January 1, 1993 is compatible with the OHD Anywhere® controller, as is any opener without safety beams, no matter when it was made. Check opener compatibility list on website for specific models.
